

THE STORY OF EARLY HUMANS

A Journey Back in Time

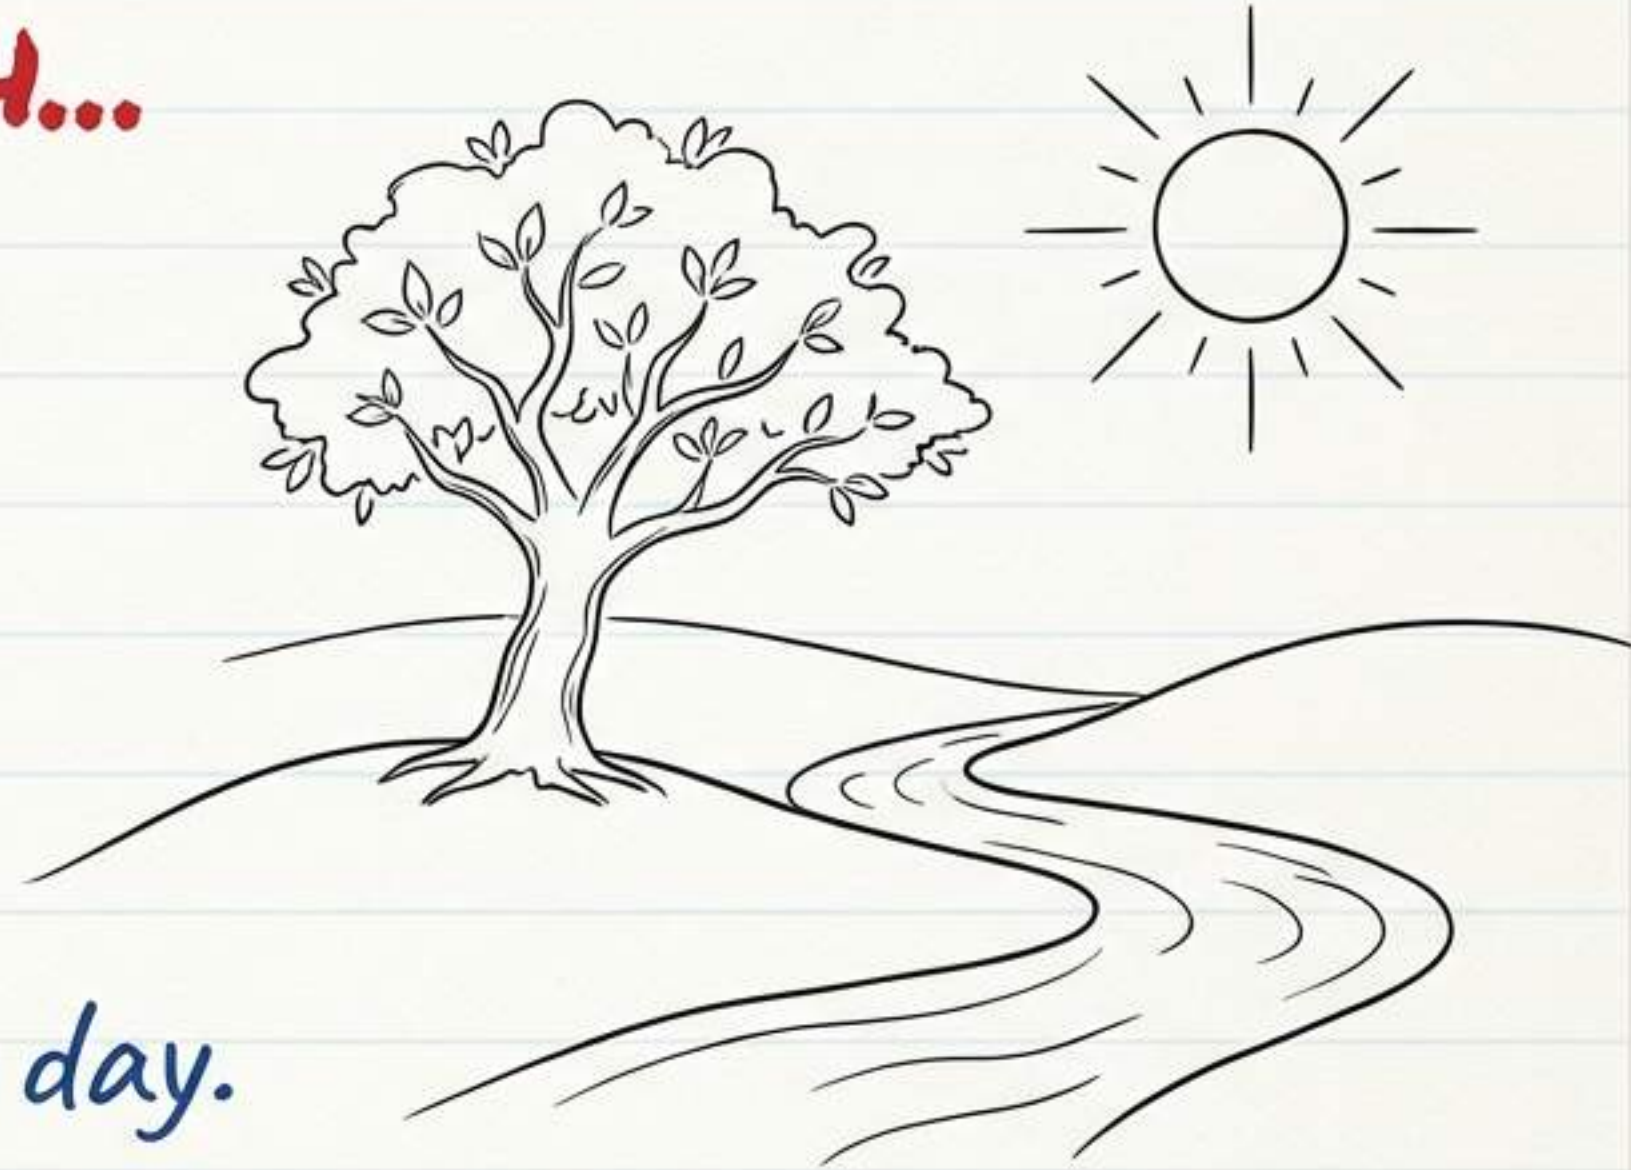

Subject: History | Chapter 1: The First People

IMAGINE A WORLD WITH...

- ~~X~~ - NO houses
- ~~X~~ - NO cars
- ~~X~~ - NO grocery stores

Just pure survival, every single day.

How did they survive?

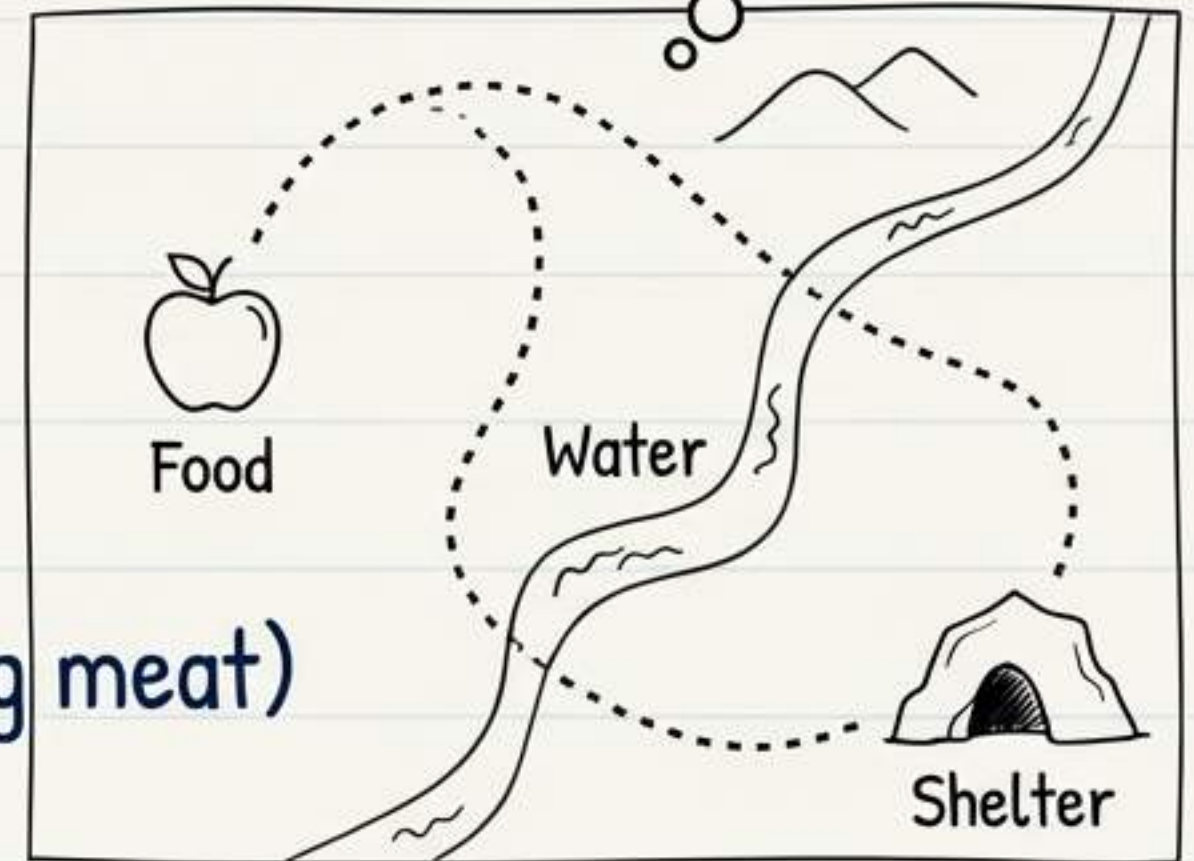

THE NOMADIC LIFESTYLE: Always on the Move

NOMADIC: A life of wandering; constantly moving from place to place with no permanent home.

- Why move? → It was all about survival.
- Always searching for the essentials:
 - Food (gathering fruits, roots, eggs; hunting meat)
 - Water (staying close to rivers)
 - Shelter (finding caves or large trees)
- This lifestyle gave them their name: Hunters & Gatherers.

Exam Tip:
Understand the
reason for being
nomadic (survival),
not just the
definition!

MILESTONE 1: THE FIRST TOOLS

Problem: Getting food was difficult and dangerous.

- Early humans were super smart and resourceful.
- They started creating things to make life a little easier.
- This was their first huge breakthrough!

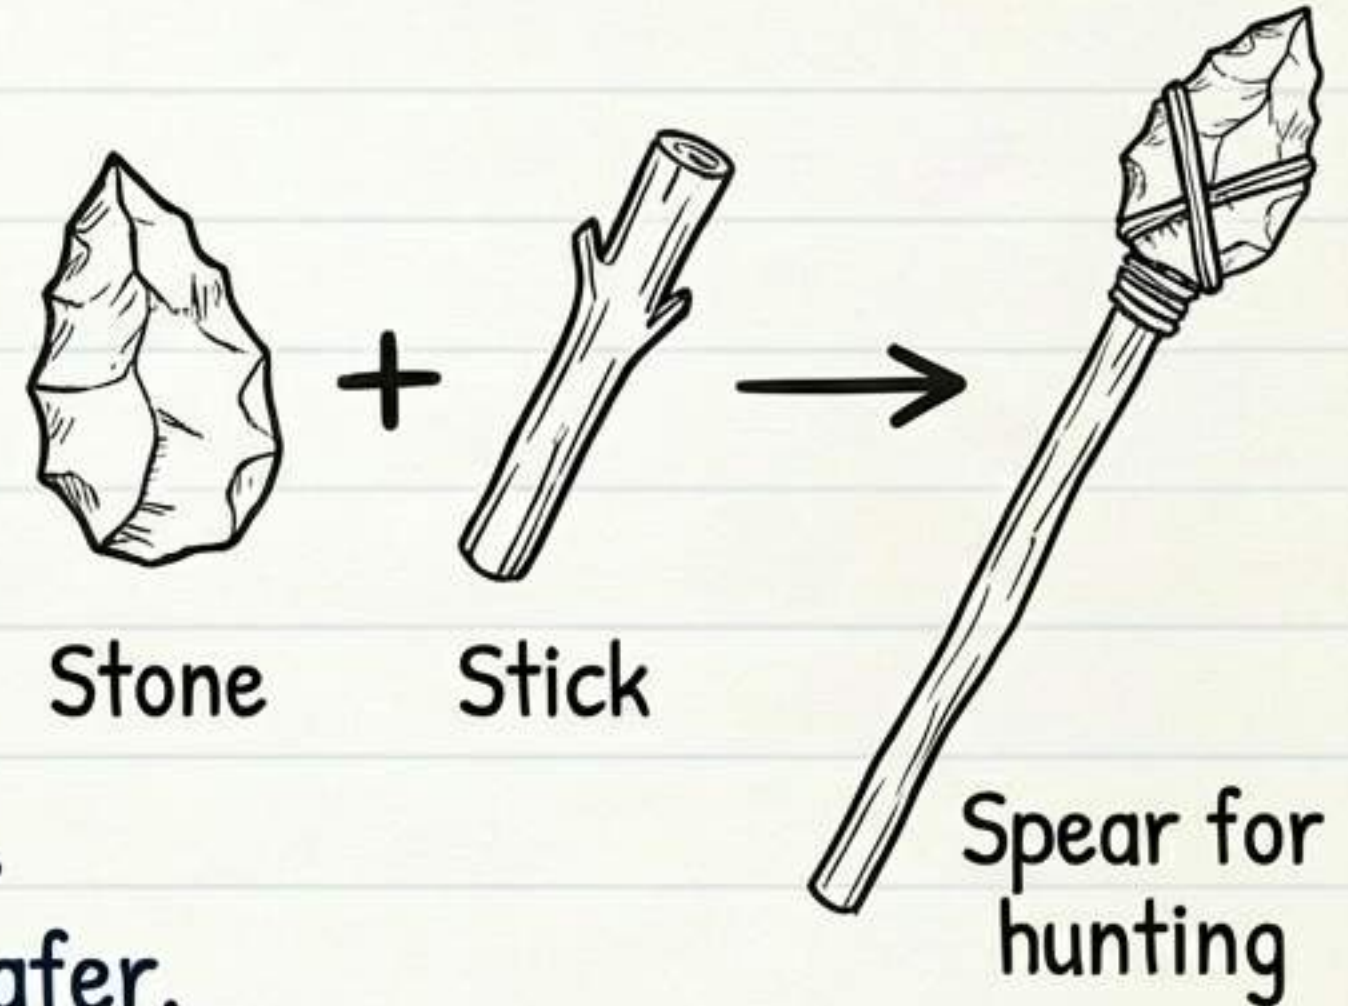

SIMPLE BUT EFFECTIVE

What were they made of?

- Made from whatever was lying around:
 - Sharp Stones
 - Animal Bones
 - Horns

What did they do?

- These tools solved everyday problems.
- Made getting food way easier & a lot safer.

Key Concept: Tools were an extension of the human body, making people stronger and more capable.

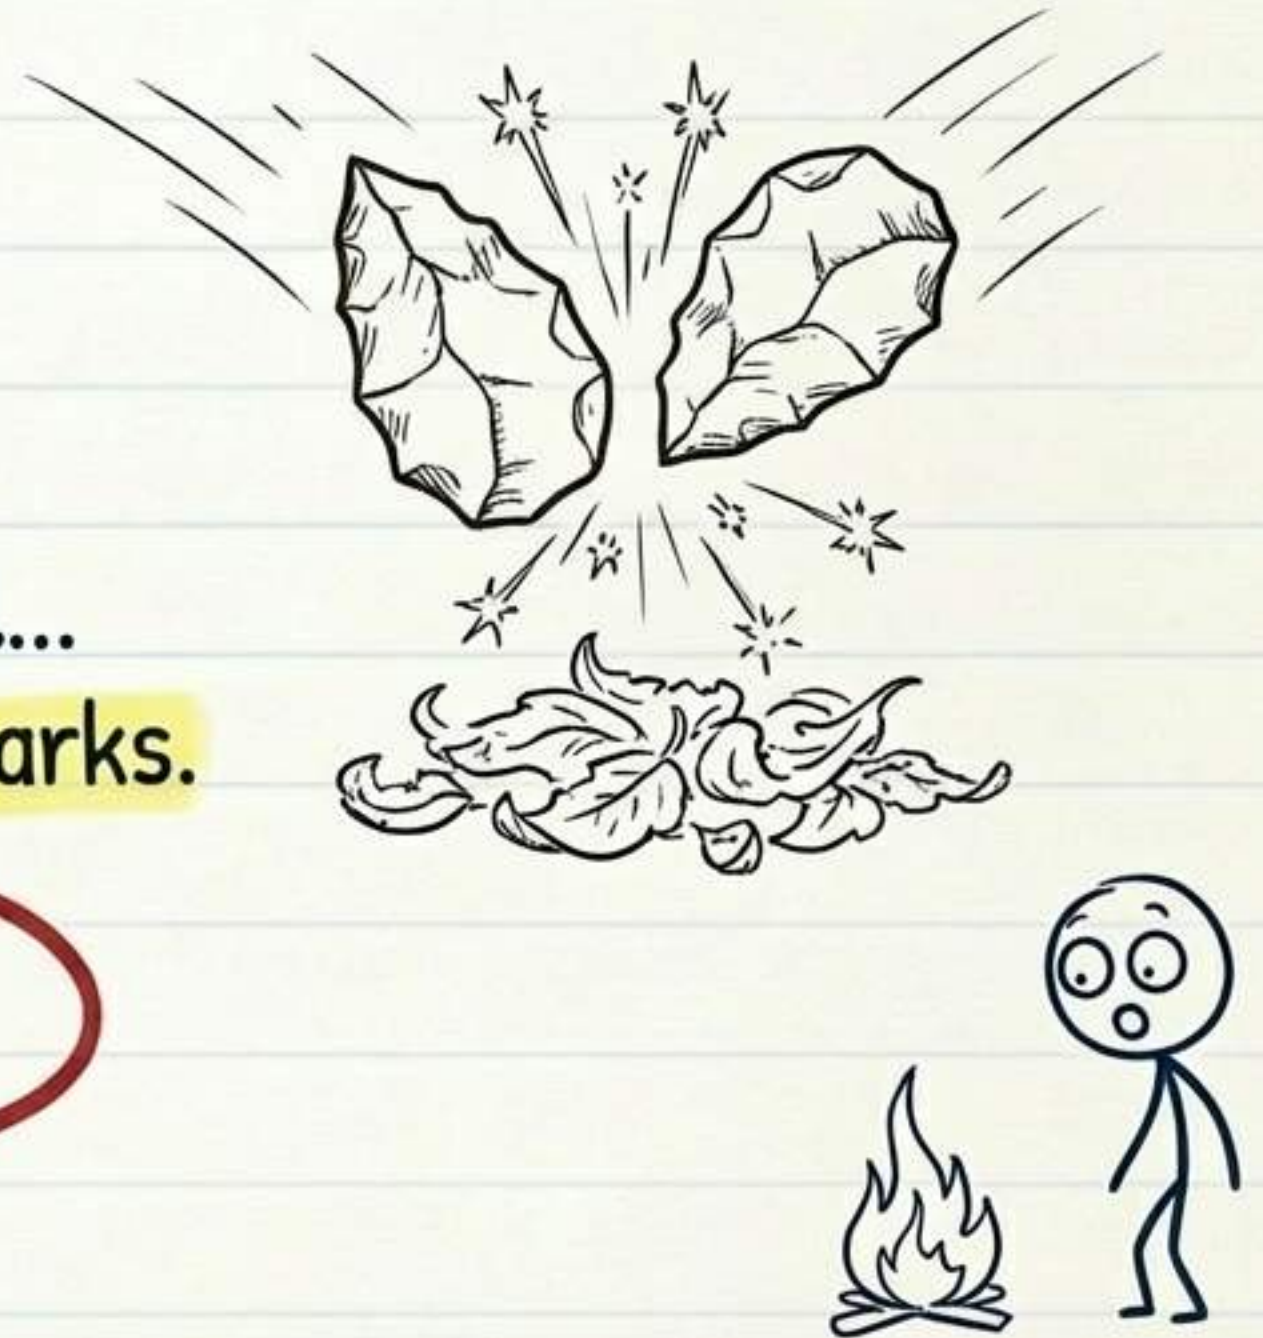

MILESTONE 2: THE DISCOVERY OF FIRE

The next big discovery was an absolute game-changer.
It literally lit up their world!

A Happy Accident?

- It was probably a total accident.
- Maybe while chipping stones for a new tool...
 - Striking stones together → creating sparks.
- Sparks + Dry Leaves →

FLAME!

FIRE CHANGED EVERYTHING

1. COOKING

Cooked meat wasn't just tastier, but also easier to digest.

2. WARMTH

No more shivering through cold nights. Allowed humans to survive in colder areas.

3. PROTECTION

A massive advantage! Wild animals are naturally afraid of fire.

Common Mistake:
Forgetting that protection was just as important as cooking and warmth!

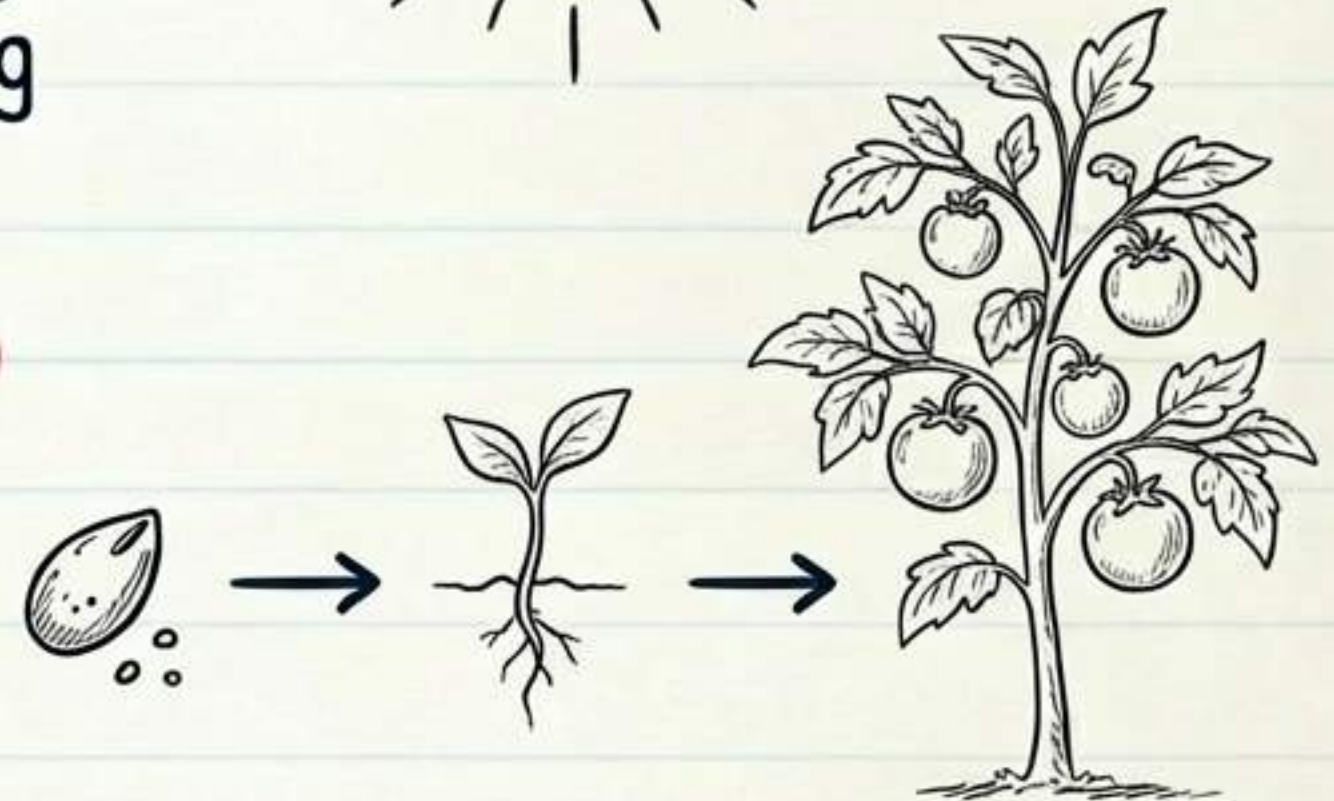

MILESTONE 3: THE DAWN OF FARMING

The Big Idea

- For ages, people would eat fruit and just toss the seeds on the ground.
- Then, a simple observation changed everything...
 - Someone noticed: New plants were sprouting right where they'd thrown old seeds!
- The connection was made: Seeds grow into new plants.

The Shift in Thinking

- From finding food → to **GROWING** food.

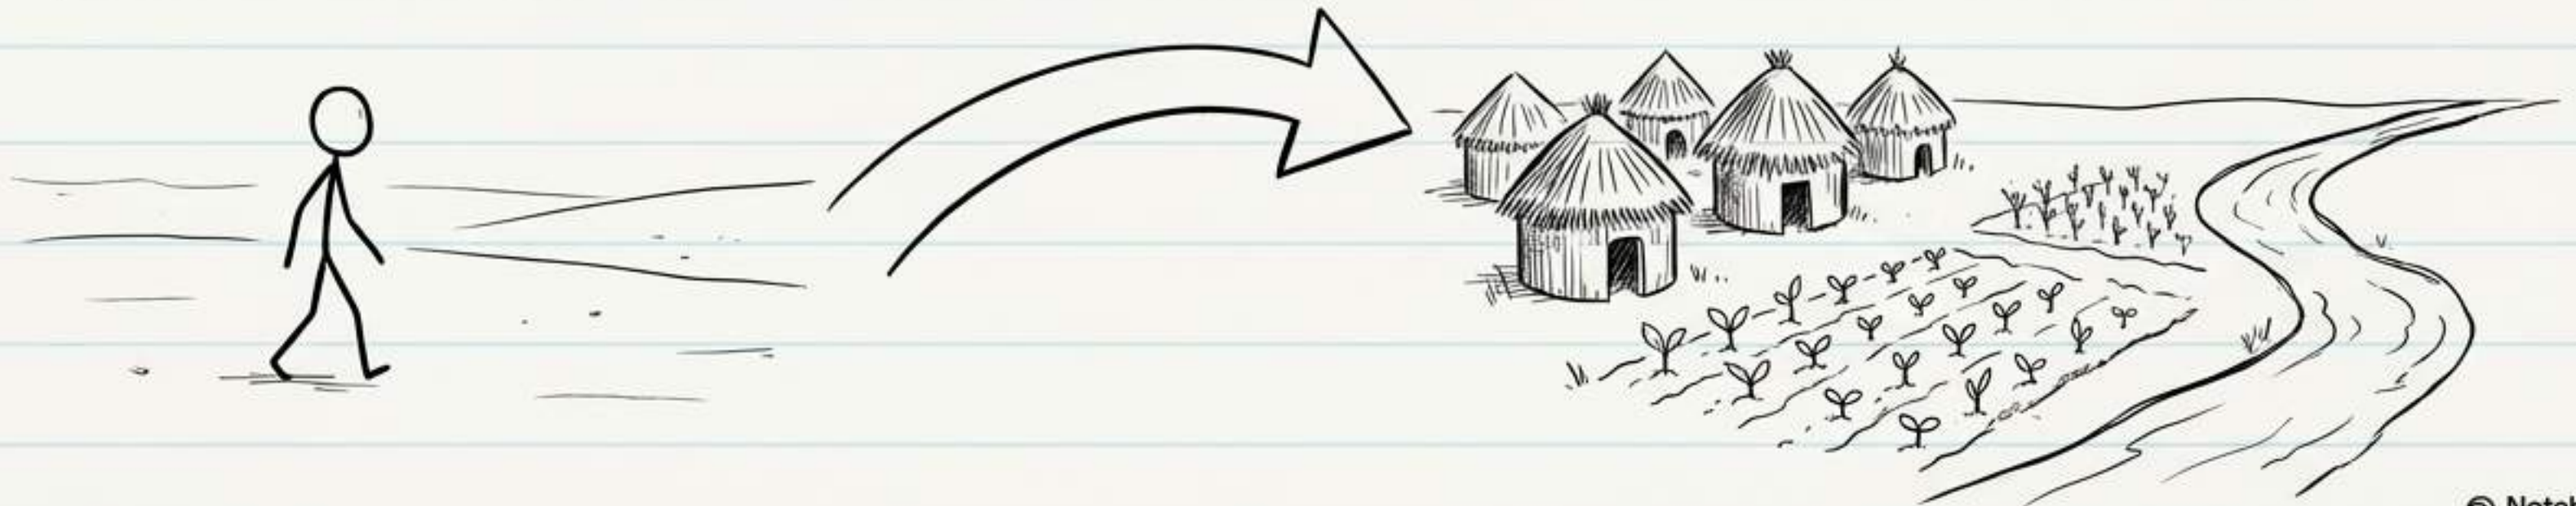

FROM NOMADS TO NEIGHBORS

The Great Shift

- Farming meant humans didn't *have* to be nomadic anymore. They could finally stop wandering!
- This led to building permanent homes.
- And creating the very first communities.

"You take the discovery of fire, you add the beginning of farming, and then you throw in the invention of the wheel, and what do you get? A totally new way of life."

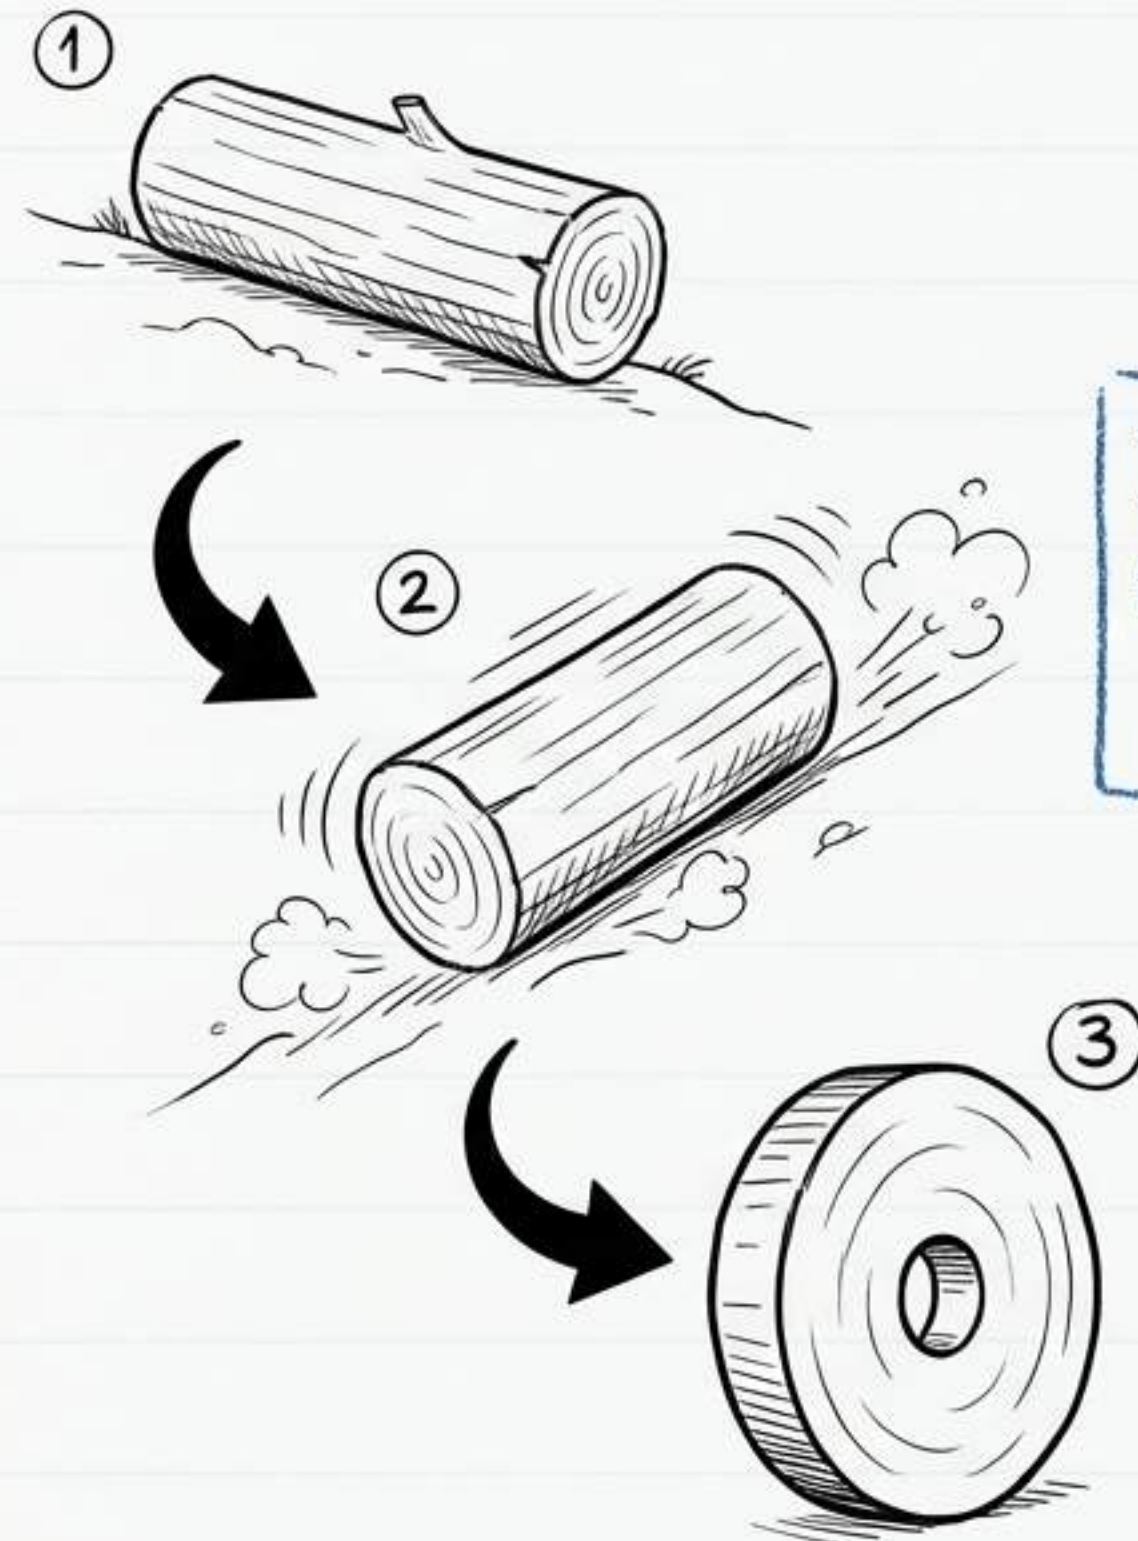

MILESTONE 4: THE INVENTION OF THE WHEEL

The Spark of an Idea

- Just like with fire and farming, the idea probably came from watching the world.
- Someone sees a log rolling down a hill.
- They notice how easily and quickly it moves.

The 'What If?' Moment

- What if we cut a slice out of that log?

****Memory Trick:***
Think "rolling log"
to remember how
the wheel was
likely invented.

AN INVENTION THAT KEPT ON GIVING

- **Transportation:** Put on carts to move heavy stuff around.

- **Pottery:** Turned on its side, it became a potter's wheel for shaping clay.

- **Textiles:** The idea was adapted to help weave cloth.

The wheel was a genius invention because it wasn't for just one thing. It was a multi-purpose tool.

MISSION-CRITICAL RECAP

1. Early humans lived a nomadic life as hunters and gatherers.
2. Their first tools were simple, made from stone, bone, and horn.
3. Fire was a total game-changer, giving them cooked food, warmth, and protection.
4. Farming started when they figured out that seeds grow into plants.
5. The wheel made it easier to carry heavy things and led to other cool inventions.

THE BIG QUESTION...

We covered four incredible discoveries:

Tools

Fire

Farming

The Wheel

If you had to pick just one, which one do you think changed the world the **MOST**?

**There's really no wrong answer, but it's a fascinating thing to chew on.*
